## Dear Sixth Grade Families,

In Unit 7, students will work on the following sixth grade Common Core standards in the Geometry (G) domain:

| 6.G.1 | Find the area of right triangles, other triangles, special quadrilaterals, and polygons by <br> composing into rectangles or decomposing into triangles and other shapes; apply these <br> techniques in the context of solving real-world and mathematical problems. |
| :---: | :--- |
| 6.G.2 | Find the volume of a right rectangular prism with fractional edge lengths by packing it with <br> unit cubes of the appropriate unit fraction edge lengths, and show that the volume is the same <br> as would be found by multiplying the edge lengths of the prism. Apply the formulas $V=I W h$ and <br> $V=b h$ to find volumes of right rectangular prisms with fractional edge lengths in the context of <br> solving real-world and mathematical problems. |
| 6.G.3 | Draw polygons in the coordinate plane given coordinates for the vertices; use coordinates to <br> find the length of a side joining points with the same first coordinate or the same second <br> coordinate. Apply these techniques in the context of solving real-world and mathematical <br> problems |
| 6.G.4 | Represent three-dimensional figures using nets made up of rectangles and triangles, and use <br> the nets to find the surface area of these figures. Apply these techniques in the context of <br> solving real-world and mathematical problems. |

## Unit 7 Concepts:

- Draw polygons on a coordinate grid
- Find the area of triangles, quadrilaterals, and other polygons
- Find the volume of a rectangular prism with fractional side lengths
- Find surface area using nets

Unit 7 Vocabulary:

- Coordinate plane
- Polygons: triangle, quadrilateral
- Area: length, width, base, height
- Congruent
- Volume, capacity
- Cubic units
- Unit fraction
- Rectangular prism
- Surface area
- Net

## Need a review?

Have your student login to Swun Math to access lesson support videos.

## Formulas for Volume of a Rectangular Prism

## Volume $=$ length $\times$ width $\times$ height Volume $=$ base $\times$ height

## Formulas for Area

Area of a Parallelogram $=$ base $\times$ height Area of a Trapezoid $=1 / 2\left(\right.$ base $_{\text {top }}+$ base bottom $) \times$ height Area of a Triangle $=1 / 2($ base $\times$ height $)$

Ask questions like these to help your child become a productive mathematical thinker:

- How do you find the area of a complex polygon? Is there another way?
- Why is volume represented with cubic units?
- What's the difference between volume and surface area? Is that like something else you've studied?
- How does a net help you find the surface area of a solid figure?

We encourage you to talk with your child daily about what was learned in math class.

Thank you for your support!
